

EJERCICIO 8

Para poder tener los puertos de la imagen remota me la descargo

<https://hub.docker.com/r/noloknolo/colors/tags>

y dentro de las layers del docker file

```
17 COPY --from=builder /opt/colors /opt/colors
18 EXPOSE map[8080/tcp:{}]
19 WORKDIR /opt
```

Después de crear los dos yml

```
PS C:\Users\palonso\Desktop\workspace_VSC\KUBERNETESSEMANALES\kubernetes-exercices-PilarAlonsoSTEMDO\soluciones\ejercicio8> kubectl apply -f colors-deployment.yaml
deployment.apps/colors created
PS C:\Users\palonso\Desktop\workspace_VSC\KUBERNETESSEMANALES\kubernetes-exercices-PilarAlonsoSTEMDO\soluciones\ejercicio8> kubectl apply -f colors-service.yaml
service/colors-service created
PS C:\Users\palonso\Desktop\workspace_VSC\KUBERNETESSEMANALES\kubernetes-exercices-PilarAlonsoSTEMDO\soluciones\ejercicio8>
```

Listo los pods

```
service/colors-service created
PS C:\Users\palonso\Desktop\workspace_VSC\KUBERNETESSEMANALES\kubernetes-
