

# Enunciado 10

Crear el namespace de manera IMPERATIVA:

kubectl create namespace n1

```
PS C:\Users\palonso\Desktop\Workspace_VSC\KUBERNETESSEMANALES\ejercicio10> kubectl create namespace n1
namespace/n1 created
PS C:\Users\palonso\Desktop\Workspace_VSC\KUBERNETESSEMANALES\ejercicio10>
```

Aplicar limitaciones de recursos de manera DECLARATIVA:

Creo el yaml y lo aplico:

kubectl apply -f resource-limit.yaml

```
PS C:\Users\palonso\Desktop\Workspace_VSC\KUBERNETESSEMANALES\ejercicio10> kubectl apply -f resource-limit.yaml
limitrange/my-limit-range created
PS C:\Users\palonso\Desktop\Workspace_VSC\KUBERNETESSEMANALES\ejercicio10>
```

Añado la etiqueta :

```
metadata:
  name: colors
  namespace: n1
```

kubectl apply -f colors.yaml

kubectl apply -f colors-service.yaml

```
PS C:\Users\palonso\Desktop\Workspace_VSC\KUBERNETESSEMANALES\ejercicio10> kubectl apply -f colors-deployment.yaml
deployment.apps/colors created
PS C:\Users\palonso\Desktop\Workspace_VSC\KUBERNETESSEMANALES\ejercicio10> kubectl apply -f colors-service.yaml
service/colors-service created
PS C:\Users\palonso\Desktop\Workspace_VSC\KUBERNETESSEMANALES\ejercicio10>
```

4. Lista todos los elementos del namespace para mostrar el resultado.

```
PS C:\Users\palonso\Desktop\Workspace_VSC\KUBERNETESSEMANALES\kubernetes-exercices-Pila
ejercicio10> kubectl get all -n n1
```

Eliminar todos los PODs en el namespace

```
kubectl delete pods --all -n n1
```

```
replicaset.apps/colors-54fbfdf68d 3 3 3
PS C:\Users\palonso\Desktop\Workspace_VSC\KUBERNETESSEMANALES

Se siguen mostrando ya que en kubernetes queda durante un tiempo el registro de los elementos eliminados
